Nanomanufacturing technology, the cost-effective and practical manufacturing solutions based on equipment and process solution platforms have been translating the promise of nanotechnology to reality in advancing the electronics and display technology and product roadmaps. Advances in nanomanufacturing technology are also fundamental to solving the energy and environment challenges. In this presentation, I will detail the challenges and opportunities facing the electronics, display and energy industries and how advances in nanomanufacturing are fundamental to resolving these challenges. The Focus of the presentation would be on how Nonmanufacturing technology Translates nanotechnology inventions into innovative products and solutions.
