

Journal of Medicinal Chemistry – Perspectives Series

The Perspectives series of the Journal of Medicinal Chemistry is designed to provide a forum for recognized experts to review the status of an area of medicinal chemistry or therapeutic target. Articles that focus on policy issues are invited provided that their content and viewpoint relate directly to the primary purpose and subject matter of the Journal. The objective of the Perspectives series is not to provide a comprehensive or exhaustive review of material, but rather to provide a critical enlightenment of an area or target with the intent of indicating the current status, the potential strategic directions for future progress and the limitations of past and current approaches. Authors will be provided a degree of editorial freedom in the manner in which they approach their topic. Perspectives are subject to the normal reviewing protocols of the Journal of Medicinal Chemistry. We expect the Perspectives series to have high visibility within the academic, industrial, and biotechnology communities, and to be of interest and value to a broad range of scientists.

There are several options for Perspectives, including the following:

1. **Perspectives** - regular articles within the guidelines indicated. Generally, these articles will not exceed 20 journal pages (80 double-spaced pages) and should not contain more than 150 references. *Please contact the Perspectives Editor if your manuscript will exceed these guidelines.*
2. **Mini-Perspectives** - short articles that provide a critical, highly-focused and non-exhaustive treatment. These articles will not exceed 8 journal pages (32 double-spaced pages) and should be limited to 70 references or fewer.
3. **Award Lecture Perspectives** - awardees of prestigious awards, both within the American Chemical Society and outside, that are related to medicinal chemistry, may be invited to prepare their award address for publication in the Perspectives series.
4. **Retrospective Viewpoints** - individuals distinguished for their lifetime contributions to medicinal chemistry may be invited to prepare an article with a personal emphasis that describes and documents their career and their contributions to the discipline.

Please check recent issues of the Journal of Medicinal Chemistry (or use the “View Recent Perspectives” link on the JMC webpage) to see examples of publications in this series.

Manuscripts are often submitted at the invitation of the Perspectives Editor. However, we welcome contributions from interested individuals, as well as suggestions for potential topics and authors. Potential authors should first contact the Perspectives Editor with a one-page outline of the topic and a brief statement of why the proposed article fits the guidelines for the series. We welcome your comments and contributions. These should be addressed to:

Dean Brown, Ph.D.
Perspectives Editor
Journal of Medicinal Chemistry
brown-office@jmedchem.acs.org

It is recognized that authors of Perspectives may have contributed earlier reviews, book chapters or research articles on the topic of the Perspective. In this case, authors should be aware of the ACS Ethical Guidelines to Publication of Chemical Research which summarizes (section B13) acceptable procedures for using material from previously published manuscripts (see following link).
(<http://pubs.acs.org/userimages/ContentEditor/1218054468605/ethics.pdf>)

It is expected that all manuscripts submitted for the Perspective series will use correct spelling and grammar. English editing service is available from ACS Publications at <http://es.acschemworx.acs.org/en/>.

Abstract: Perspectives should include a brief abstract, not to exceed 150 words.

Biographical sketch: Perspectives should include a brief biographical sketch (limit 125 words) of each author.

Submission: All submissions to the Journal of Medicinal Chemistry must be completed electronically. Details may be found at <http://pubs.acs.org/journal/jmcmar> under the Submission & Review tab.
